# Travel Sickness

## Understanding Travel Sickness

Often triggered by motion—be it in Ships, Boats, Cars, Planes or Gaming.

- Motion sickness is triggered by low-frequency movements (e.g. travel, video gaming).
- It results from conflicts among visual perception, balance, and movement assessment.
- Sensory information reaches the brain's areas for spatial awareness and self-perception.
- A mismatch between visual input and bodily sensations causes discomfort.
- Common symptoms include nausea and vomiting, especially with unexpected experiences.

### Testing information & Definitions

Definition	Information
<b>Meta III Headset</b>	The Meta III headset option provides the option to upgrade and install Real World Transparency, so you can see the real world around you while still getting the benefits of our sea sickness remedy, at any future time. It does however require the client hold a Meta Mobile Device Management software licence with an annual fee.
<b>Drop Test: MIL-STD-810G Drop Test 516.6</b>	A U.S. Military Standard, the MIL-STD-810G 516., defines a process by which devices are dropped 26 times, on all faces (sides), corners, and edges. Distributed over 5 test units, the unit test includes 8 corner drops, 12 edge drops, and 6 face drops. Visual inspection after every drop.
<b>Sun Exposure test</b>	
<b>Wi-Fi Security test</b>	
<b>Headset waterproofing IP3</b>	An IP 3 rating means a device is protected from water spraying at an angle of up to 60°
<b>Waterproof case IP 67</b>	<p>IP67-Rated enclosures provide high-level protection due to their high water and dust ingress protection ability.</p> <p>The first digit of IP67 (6), is the highest level of protection against solid ingress, such as windblown dirt and other airborne solid materials that are invisible to the naked eye. Combined with their high-level water-ingress protection indicated by the second digit (7), IP67-rated enclosures can withstand water hose and jet sprays and can sustain momentary water immersion in depths of 150mm to 1000mm up to 30 minutes maximum. IP67-rated enclosures are guaranteed to function in indoor, outdoor, and in demanding industrial and commercial settings.</p>
